

What is Intelifi?

In a nutshell, Intelifi is a Managed & Monetized Carrier Grade WiFi Solution. That means it's a WiFi network built with high-quality devices (Ruckus), backed with an intelligent gateway that handles basic network services like DHCP, RADIUS, AAA, etc. that also bring in features like captive portals, splash pages, credit card authorization, ad replacement, per-client rate limiting, bandwidth quotas, and network monetization features (i.e. your network making money for you).

Key Features:

- Traffic is switched local to your network.
- Centralized, redundant access point controllers to manage client handoff, interference mitigation, radio channel changes, etc.
- Carrier grade access points for a world-class customer experience, all the way down to the RF connection to the client device.
- Nearly limitless way to generate revenue and/or brand awareness (ad sales, social media campaigns, access coupons, daily/weekly/monthly packages, 'Freemium' packages, user login, etc.)
- Personal VLANs for network security and customer privacy.
- Multi-WAN support.
- 24x7 technical support for end users.

Deployment Opportunities:

- Event spaces
- MDUs/dormitories
- Office complexes
- Hospitality
- Community Hotzones (Indoor or Outdoor)
- Schools/campuses
- Assisted living facilities
